Heeyeon Yang Cloud Infrastructure

Seoul, Korea | [redacted] | yyheeyeon@gmail.com | linkedin.com/in/heeyeon-yang | github.com/heeyeon-yang

Profile

Cloud engineer with strengths in high-availability design on AWS and infrastructure as code with Terraform.

Projects

Multi-AZ Failover Validation on EKS | Team project, KT Cloud TECH UP | 2026

- Based on real outages caused by single-zone setups and manual failover, tested whether a flash-sale shopping service could keep taking orders during failures, with zero lost and zero duplicate orders.
- Built the order service to record every successful and failed order, and worked with the database lead to check order responses against stored orders and stock after each test.
- Set up HTTPS access with Route 53, ALB, and ACM and split node and database health checks, so orders resumed within 21 seconds of a database failover without restarting the app.

Real-Time IoT Pipeline on EKS | Personal project | 2026

- Built a sensor data pipeline on EKS with all infrastructure defined in Terraform, streaming events through Kinesis into DynamoDB with automated alerts.
- Gave each service its own IAM role and deployed through GitHub Actions and ArgoCD without long-lived AWS keys.

QuizLab, AI Quiz Platform on AWS | Personal project | 2026

- Designed the network in Terraform without a NAT Gateway, removing an estimated $45 in monthly cost while keeping the database and cache unreachable from the internet.
- Moved quiz generation into a queue with retries so failed requests wait for another attempt instead of disappearing, and confirmed it in end-to-end testing.

Experience

Team Lead | EFUB, Ewha Web Development Club | 2024 - 2025

- Bridged designers and developers across 3 concurrent projects of 8 to 9 members by writing a shared handoff guide that standardized terms and specifications.
- Reviewed designs for technical feasibility before development, moving implementation issues into the design phase instead of after build.

Undergraduate Research Assistant | UX Design & Research Lab | 2024

- Narrowed 50+ proposed features to 6 core user scenarios for a government-funded healthcare data platform, keeping only what wearable device data could support.

Skills

AWS | EC2, S3, IAM, VPC, RDS, EKS, Lambda, CloudWatch
IaC & CI/CD | Terraform, GitHub Actions, ArgoCD
Containers | Docker, Kubernetes
Languages | Python, Bash, SQL

Education

KT Cloud TECH UP — Cloud Infrastructure Track | Seoul, South Korea | Aug 2026 - Expected Mar 2027

Ewha Womans University | Seoul, South Korea | 2022 - 2026
B.S. in Content Convergence (Major) & Software Engineering (Double Major) | GPA : 4.15 / 4.5

Awards

ICT·SW Women's Startup Competition — Encouragement Award | KIBWA | 2024

- Defined the core feature set for an AI learning service from 8 user interviews, later rebuilt on AWS as QuizLab.

Certifications

AWS Certified Solutions Architect – Associate | AWS | 2026

Engineer Information Processing (정보처리기사) | HRDK | 2026

Languages

English (Advanced) | Korean (Native) | Japanese (Conversational)
